

PRINCIPALITY

Principality Medical Limited - Environmental Policy

The Company is aware of its environmental responsibilities and as such has implemented such procedures as to not only comply with relevant environmental legislation, regulations or other requirements but, in fact, to ensure that any negative environmental impact is minimised while promoting the monitoring, review and continual improvement of those activities which affect local and global positive environmental impact.

These procedures are documented and controlled within the scope of our Quality Management activities and, as such, are regularly reviewed and maintained to ensure best current practise.

With these principles in mind all Company personnel are so instructed to be mindful of our commitment to this Policy and, at all times, to endeavour to effect positive environmental impact, however small this contribution might be.

The scope of these procedures range from control of waste disposal (encompassing meeting the Duty Of Care relating to the disposal of controlled waste to the effective recycling of office, canteen and industrial waste, eg paper, cardboard, etc) to control of fume emissions as well as noise pollution to our immediate locale.

Also, with a consideration to the Human aesthetic value, the Company deems it important that both externally and internally the environment is conducive to promoting harmony – be this through good housekeeping practises or ongoing maintenance of buildings and work space.

Terms

Environmental impact – any change to the environment, whether adverse or beneficial, which results from the Company's activities or products

Environment – surroundings in which the Company operates, including air, water, land, natural resources, flora, fauna and Human interactions
